Transforming the Building Industry with AES SiteView

- AES SiteView addresses the challenges faced by the building industry in capturing and sharing essential information during construction projects.
- The platform simplifies and streamlines processes, guiding users through photo capture, geo-tagging, and validation at every key stage.
- AES SiteView ensures compliance, saving time and providing clear guidance without the need for users to establish photo requirements.

Industry Challenges and AES SiteView Solution

- Developers are typically required to take 15 key photos throughout the build, adding strain to already stretched site teams.
- Meeting obligations, including geo-tagging and time-stamping, poses challenges for efficiency and accuracy.

- AES SiteView provides a digital solution, allowing seamless information transfer across devices.
- Site teams can easily take and upload photos via the app, ensuring validity with geo-tags and time-stamps.
- The app aids energy assessors in reviewing photos to meet industry standards, producing reports for Building Control and homeowners.

Ensuring Quality with AES SiteView

- The AES SiteView team manages the entire process. It offers a cost-effective solution for developers which does not require additional staff to operate a platform, create sites, and define criteria.
- Site managers are not required to choose which photos are needed. AES SiteView utilises SAP data to determine the necessary photos, providing a hands-off solution for the site team. The automatic selection of photos makes AES SiteView unique in the marketplace.
- Fully integrated feedback loop to site managers through a chat function.
- AES SiteView also provides warnings for photos that lack geo-tags or are too far from the site location.

Key Benefits

Target Audience: Builders, contractors, architects, engineers, and project managers in the building industry.

- Establish photographic evidence requirements effortlessly.
- Reduce costs and improve project outcomes.
- Simplify Building Regulation commitments and ensure industry standards are met.
- Enhance communication, collaboration, and cost control.

"The AES SiteView app is simply better than all the competition. As an SME, we do not have the resources to develop our own system for Part L compliance but having investigated other options, the AES solution had by far the best interface for our site teams. It is intuitive, well set up and the support and training has been first class. We were quite worried about how difficult the demonstration of Part L compliance may be but this app has made it seamless."

Graham Hutton, Operations Director, Baker Estates

What do our Clients say? Case Study

Mateusz Palka | Site Manager | 3 West Developers

Q What were the issues facing you with the introduction of photo evidence?

A We didn't know which pictures would relate to which plots. It took me a long time to go through our plot schedule and work out which images were applicable to which plots. We didn't know how we would get compliance sign off from the SAP assessor.

Q How did AES SiteView solve these issues?

A The AES SiteView app pre-populates the images required to the specific plot. As AES carry out our SAPs it pre-populates the plots with the right address and tells me what images I have to take. It also gives me an example of the detail I must photograph so makes things nice & simple.

Q How easy is it to use? How easy is it to get accepted images?

A It's very simple to use. It works on smart phone, tablet & laptop. I take the image, click upload and then I get an alert back saying it has been accepted by the SAP Assessor. I have had a few images rejected, but it's great as it tells me the mistake and how to rectify. The accept/reject process happens within the hour of taking the image normally. Very efficient.

Gary Webster | Head of Technical | Bewley Homes

Q How did AES's SiteView platform solve the problems/issues of photo evidence?

A We did not have a solution before the trial with you! The easy-to-use live platform, along with reporting to Building Control has worked well to ensure we comply with the latest regulation requirements.

Shane Pike | Head of Technical | Baker Estates

Q What were the problems/issues facing you with the introduction of photo evidence?

A

- Understanding the plot specific photos that are required and how to capture this for the site managers to know which stages they need evidence of.
- Having a central location to save the photo evidence to allow other staff members to see what stage we're at.
- How to sign off every photo taken to ensure it's suitable for the evidence.

Q How did AES's SiteView platform solve the problems/issues faced with photo evidence?

A

- The SiteView platform helped as the SAP assessor would confirm which photos are required on every plot based on their design SAP schedule.
- The app itself stores the photos and with access granted to necessary staff, we can review any site/plot.

AES review every photo uploaded within 24 hours' notice and provide **feedback** if the photo isn't suitable.
